Detailed Action

Specification

1. The specification is objected to because of the following minor informalities:

- Page 10: in the substitute amendment "a17", delete "because" and then insert "hence" between "... materials" and "experimental kinetic data ..."; and
- Page 44: two tables are cited with one reference label; therefore, separate labeling is required. Suggestion: Table 7a and 7b respectively.

Claim rejection – 35 U.S.C. 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) The invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act

of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 13 is rejected under 35 U.S.C. 102(e) as anticipated by Wang et al. (U.S. Patent 6,489,168).

In reference to claim 13: Wang et al. teaches a process for the development of scaleable, high performance material (see Wang et al., column 1, lines 30-55). The process includes computer assisted knowledge cycle (predictive analysis) that uses experimental data (see Wang et al., column 13, lines 29-53, and columns 14-22).

Allowable Subject Matter

4. Claims 14-28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant disclosure.

- Turner et al. (U.S. 6,306,658) discloses an apparatus and method for carrying out and monitoring the progress and properties of multiple reactions, which is useful for synthesizing, screening, and characterization of combinatorial libraries.
- McFarland. (U.S. Patent 6,373,570) discloses a method and apparatus for screening diverse arrays of materials, such as techniques rapidly characterization of compounds in arrays of materials in order to optimize/discover new materials.
- Weinberg et al. (U.S. PAP 2002/0098471) discloses a method of synthesis, screening and characterization of organic metallic compounds and catalysts.
- Hinsberg, III et al. (U.S. Patent 5,625,579) teaches a system and method for simulating a mechanistic kinetic process over a predetermined time period to establish equilibrium conditions.
- Baig (U.S.PAP 2003/0077653) teaches a method for identifying active site inhibitors of a target protease.
